# Comparative Analysis of Author Name Authority Data

SAKAI Kiyohiko & KYOTO Toru
Contents Division, Development and Operations Department,
National Institute of Informatics (NII)

1. 60 names
2. Feature in Japanese Name
3. Feature in Chinese Name
4. Feature in Korean Name

In order to clarify how each organization of each country is creating author name authority data, in an argument of a last workshop held at January 10-11, 2001, it became the conclusion that to introduce how each ten high authors of Japanese name, Chinese name and Korean name which may be shared with each organization of each country recorded, and to make a comparative analysis.   After this, the result which worked in response to the conclusion is introduced.

## 1.      60 names

Author names under question are 20 names each of three languages, in total  60 names.

|    | Japanese name | Chinese name | Korean name |
|----|---------------|--------------|-------------|
| 1  |               |              |             |
| 2  |               |              |             |
| 3  |               |              |             |
| 4  |               |              |             |
| 5  |               |              |             |
| 6  |               |              |             |
| 7  |               |              |             |
| 8  |               |              |             |
| 9  |               |              |             |
| 10 |               |              |             |
| 11 |               |              |             |
| 12 |               |              |             |
| 13 |               |              |             |
| 14 |               |              |             |
| 15 |               |              |             |
| 16 |               |              |             |
| 17 |               |              |             |

| 18 | | | |
|---|---|---|---|
| 19 | | | |
| 20 | | | |

Each of these names was searched in author name authority file of NACSIS-CAT to find if they already exist.

Only four names are not found in NACSIS-CAT. Four names are " " (No.19 of Chinese name), " " (No.4 of Korean name), " " (No.16 of Korean name) and " " (No.20 of Korean name).

## 2.  Feature in Japanese Name

The number of Japanese author name authority records in NACSIS-CAT is 280,000 (about 24% of total record of author name authority file).

### (1) Names treated as one word (as a single whole name)

Names, either surname and/or given name, conventionally used as a single whole name with title of position or office, are treated as one element.

Example:

(No.1 of Japanese name) and (No.2 of Japanese name)

These are treated as a single whole name, since " " and " " are the titles of position.

### (2) The same name of different persons

For distinguishing the same name of different person, "additions" are applied. Types of additions are: date of birth and death profession specialization roman numerals.  There are examples of additions such as the date of birth and death.

Example:

(No.20 of Japanese name)

There are four records of " " in NACSIS-CAT, each record is distinguished by additions such as the date of birth.

The distinction is normally made by "date of birth and death," however, when it is not certain of the date of birth and death, additions such as profession  specialization may be used as the first element of the additions.

Example:

(No.10 of Japanese name)

There are five records of " " in NACSIS-CAT, one record is not recorded additions, three records are distinguished by additions such as the date of birth, and one record is distinguished by additions such as the profession " " (it means gardener).

### (3) Variant forms of See From reference

See From references are created by catalogers in anticipation of future use. Types of Variant forms are : romanized descriptive form; different reading, different word division of romanization, and real name.

Romanized descriptive forms are further categorized: romanized reading, AACR form, (example: (No.3 of Japanese name) (No.4 of Japanese name) and (No.12 of Japanese name)) and in other language (example: (No.1 of Japanese name), (No.2 of Japanese name), (No.4 of Japanese name) and (No.12 of Japanese name)).

## (4) Note

Note field(s) is used to record where the evidence is found in which materials and in what form. However, in our database, there are not many notes recording information which part the data was taken, for example, "from title page" or "from cover", etc. However, a considerable number of records hold a note such as personal information such as profession, status or title, personal history.

# 3 Feature in Chinese Name

The number of Chinese author name authority records in NACSIS-CAT is 40,000 (about 3.4% of total record of author name authority file).

## (1) Names treated as one word (as a single whole name)

When it is not separated between the family name and the given name, it is treated as a single whole name as is done in Japanese name.

Example:

(No.11 of Chinese name)

## (2) Variety of romanization

The number of romanized description in See From reference is more than those of Japanese names and of Korean names, mainly because of a variety of Rominization methods, for example Wade-Giles, Pinyin and Kunrei-siki.

Example:

(No.4 of Chinese name), (No.11 of Chinese name), (No.12 of Chinese name) and (No.15 of Chinese name)

## (3) Variety of Japanese reading

In See From reference field, there are genuine Japanese readings and Kana description of Pinyin among the Kana readings that are matching to Kanji description.

Example:

(No.12 of Chinese name) and (No.14 of Chinese name)

Though the record of " " has Japanese readings " " in See From reference field, it is better to record one more general readings " " to See From reference. And it is better to record " " to the record of " "

# 4    Feature in Korean Name

The number of Korean author name authority records in NACSIS-CAT is 3,000 (about 0.3% of total record of author name authority file).

## (1) Reading of the Uniform Heading

Reading of the uniform heading is also well known in the form of mother tongue. When Japanese romanization is established based on the form of mother tongue reading among the reference books, the reading, other than the national established form, is used.

The range of "well known" depends on catalogers, and causes variant forms in the index for search.

Example:

(No.1 of Korean name),        (No.13 of Korean name) and
(No.15 of Korean name)

## (2) Note

There are 5 records among the 17 records that have no "note".  It is presumed that these records were created in the early stage when the note was optional, and there has been no update to these records since their creation.  It is assumed that these records have little updates such as linking, or confirmation.

Example:

(No.3 of Korean name) and        (No.10 of Korean name)

## (3) Short of information

The amount of information recorded is generally smaller than that of other language.  It is presumed that the operation is still tentative for Korean materials.

Example:

(No.10 of Korean name),        (No.12 of Korean name) and
(No.14 of Korean name)
