Dr. Steve Liang
Assistant Professor
AITF-Microsoft Industry Chair on Open Sensor Web
steve.liang@ucalgary.ca

Mission Statement

- enable organizations to share, collaborate and use the information generated from the world around them

Solution

- developing open standard-based sensor data management systems make it simple to *publish, search for, understand, and use* environmental monitoring data
- in some cases, even to *control* the Internet-connected sensors and devices

“the number of Internet-connected devices will reach between 50 and 60 billion by the end of the decade”

Verizon and Ericsson, 2011

Source: Wall Street Journal

3 Vs of BIG Data

- **Volume**

- 5.6 billion mobile phones in use (2011)
- 50~60 billion Internet-connected sensors by 2020

- **Velocity**

- 30 billion pieces of content shared on Facebook every month

- **Variety**

- Many kinds, fragmented, no sampling scheme, no metadata, no quality control

HOW TO LINK DIFFERENT SENSOR NETWORKS?

air quality

traffic

VISION: AN WORLD WIDE SENSOR WEB

Unleash the Power of Sensors

Innovation in Assembly

A Web of Sensors

– Dr. Steve Liang – <http://sensorweb.geomatics.ucalgary.ca> –

Example - GeoCENS

GeoCENS

- An \$1.08 million project funded by Canarie and Cybera
- An open sensor data portal (★★★★★)
- Very easy to use
- High performance
- More than 1000 users per month

Challenges

How to **connect** multiple data sources in a coherent environment?

How to **find** the data you want?

How to **browse** the sensor web in case you don't know what you are looking for?

How to **process** the sensor data streams efficiently?

How to automate as much **QA/QC** as possible?

How to maintain **Openness** and **Privacy** at the same time?

- Sensor Data
- SPS
- Maps / Remote Sensing
- Non-sensor Datasets

Our Project Portfolios - AAFC Drought Monitoring Network

AAFC Drought Monitoring Network

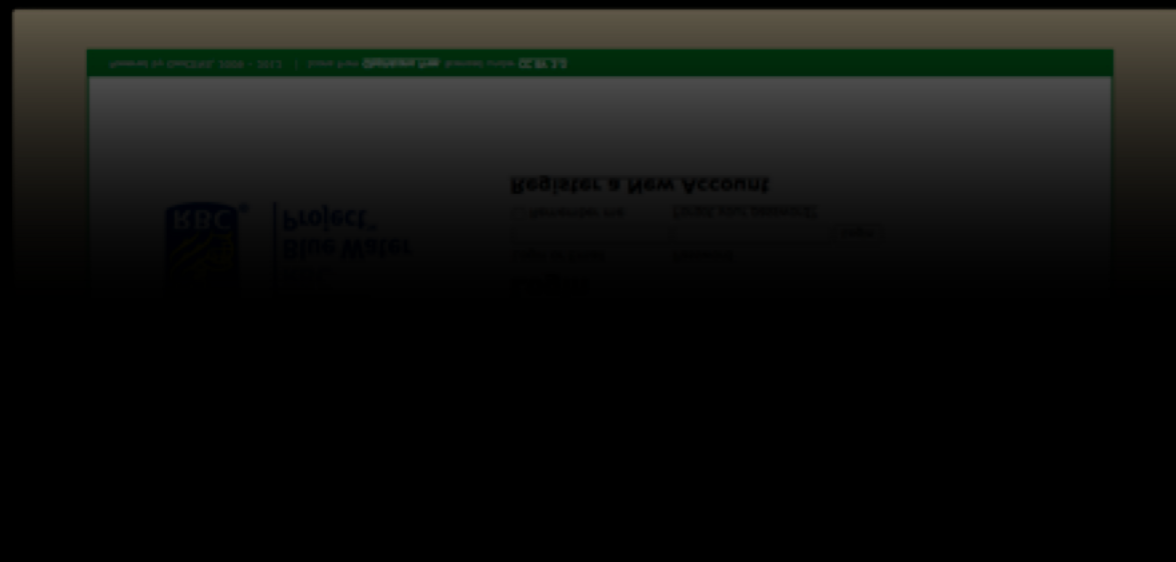

- Agriculture and Agri-Food Canada is deploying soil moisture monitoring networks across Canada
- use GeoCENS as the main frontend to manage, share, and visualize data
- online early next year

Our Project Portfolios - Rockyview

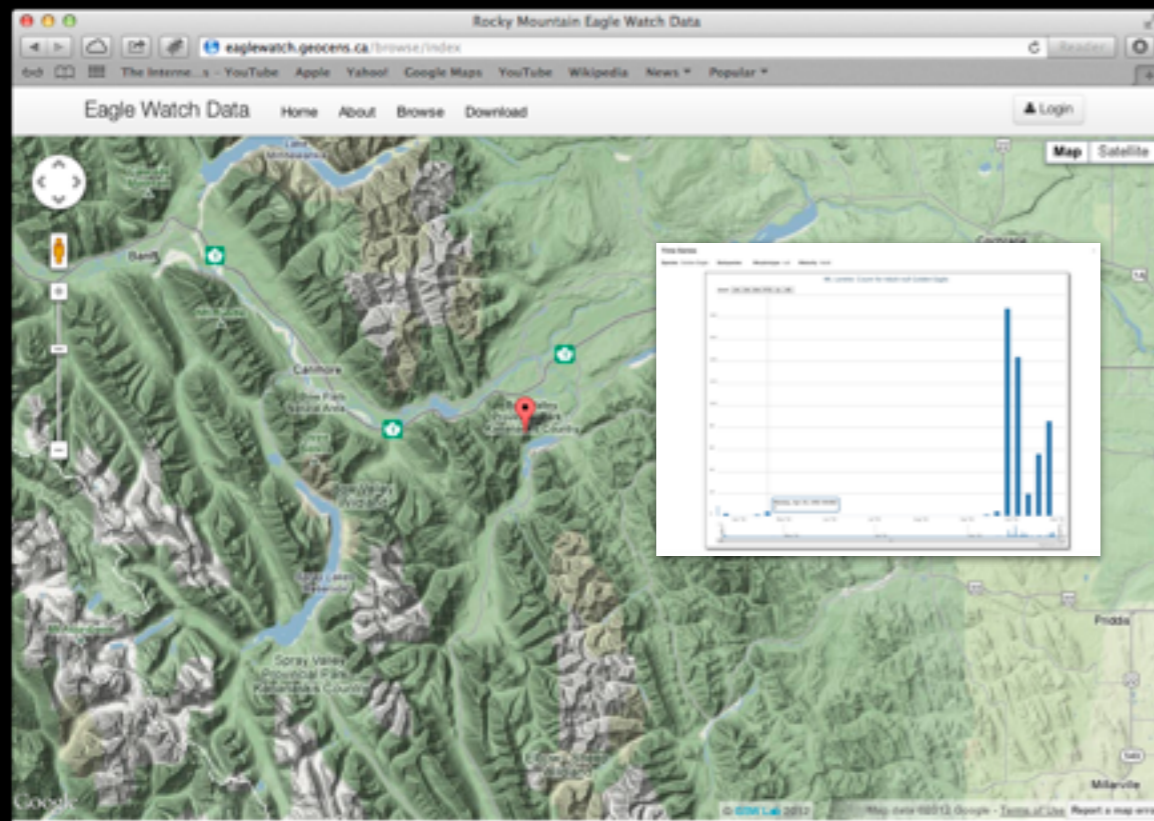

Rockyview Well Watch

- A RBC Blue Water Project
- long term groundwater monitoring
- more than 40 well owners
- well owners use the platform to upload their well readings
- data since 2008
- QA/QC by UofC Hydrologists

Our Project Portfolios - Eagle Watch

Eagle Watch

- a citizen sensing project counting eagles for more than 20 years in the Rockies
- used to use paper and excel data sheets to record and share data
- the Eagle Watch portal *significantly simplify* the data entry, processing, and sharing work

An Exciting New Direction: Internet of Things

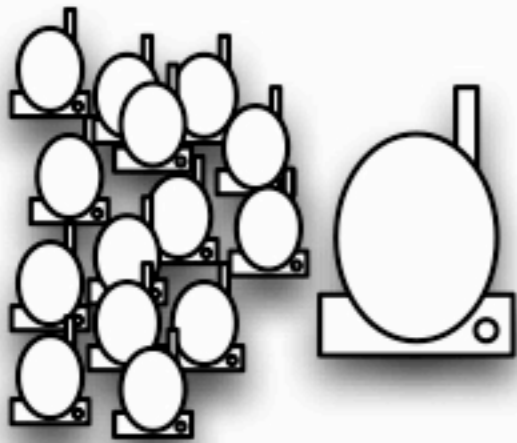

We propose to build

- a low-cost networked sensor allows anyone to collect very high resolution environmental readings outside of their home.
- two components:
 - sensor
 - a sensor cloud infrastructure

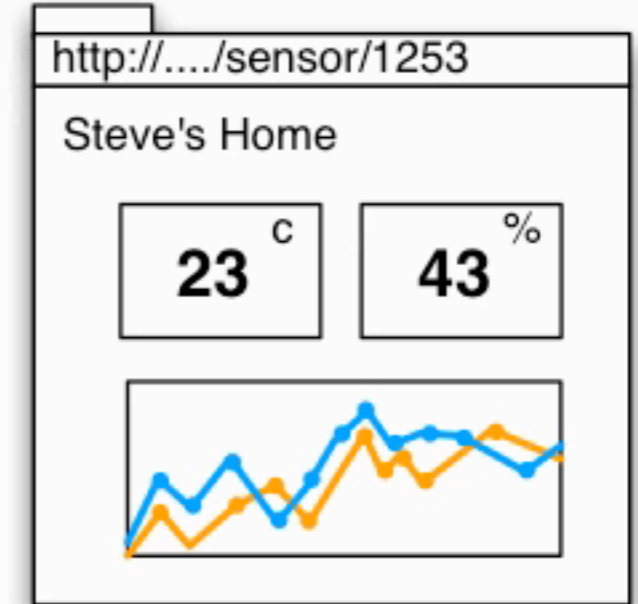

Differentiation

- low cost (<\$100)
- anyone can set up (plug-N-play)
- real-time monitoring (Internet-connected)
- open system (open APIs, no vendor lock-in)
- large scale (due to its low cost)
- rich context

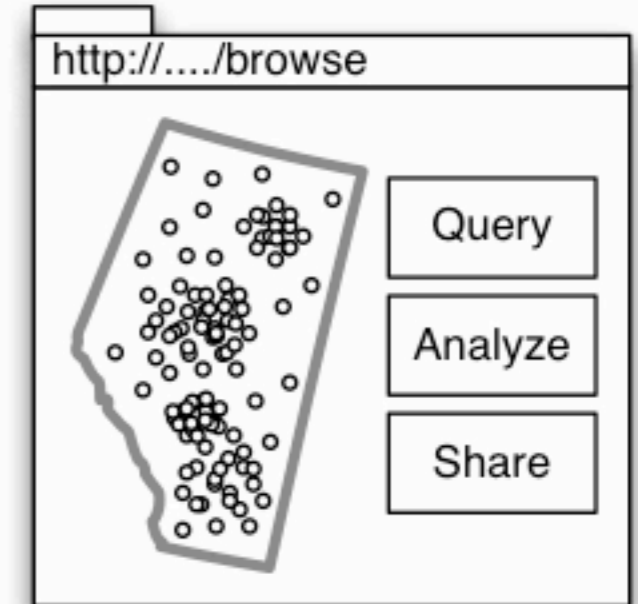

Personal Sensor Dashboard

Browse all sensor readings

Citizens as Sensors (current prototype at UofC)

What can be measured

- CO
- NO₂
- O₃zone
- Humidity
- Temperature
- Dust (PM 5)
- Gas
- Light
- Radiation
- Energy use

*the final configuration depends on applications and cost
