

SINET5 and GÉANT:

Connecting Japan and Europe Together

Steve Cotter

Chief Executive Officer

GÉANT

SINET5 Launch Ceremony

25 May 2016

Topics to be covered

- GÉANT in Europe
- GÉANT in the World
- Japan-Europe Users
- Global Networking
- GÉANT supporting SINET
- Conclusion

GÉANT in Europe

- Formed out of merger of DANTE and TERENA in 2014
- Based in Amsterdam (GÉANT Association) and Cambridge (GEANT Limited)
- 92 staff – 21 nationalities
- Not for profit, revenues ~40M Euro (~45M USD)/year
- Owned by the European NRENs and partly funded by the European Commission
- Associate members include:
 - ICT companies
 - Major research infrastructures and projects.

GÉANT Network & Services

e-Infrastructure for Europe

500Gbps super-channels

1,000+ terabytes of data across network per day

50,000 km network infrastructure on 44 routes

Widely diversified footprint

- Serves 50 million users
- 10,000 institutions
- 41 countries in Europe and beyond

GÉANT offers more than just a high-performance network:

- Test beds and SDN development
- Security (TRANSITS training, TF-CSIRT, Certificate Service)
- Performance tools & expertise
- Federated Trust & identity (eduGAIN) and mobility (eduROAM)
- Cloud services marketplace
- Real time communications and media management

GÉANT in the World

www.africaconnect2.net

Pan-African connectivity project

3 regional clusters and partners:

- Eastern & southern Africa (UbuntuNet Alliance)
- West & Central Africa (WACREN)
- North Africa (ASREN)

3.5 years (up to end of 2018)

€20 EU co-funding (75%)

www.eumedconnect3.net

EU network for Mediterranean since 2004

3rd phase (up to end 2016)

Lebanon & Jordan connected,
Palestine eligible

North African countries joined
AfricaConnect2 in 2015

€3.3m EU co-funding (36%)

New phase under discussion with EC

and partner networks enabling user
collaboration across the globe

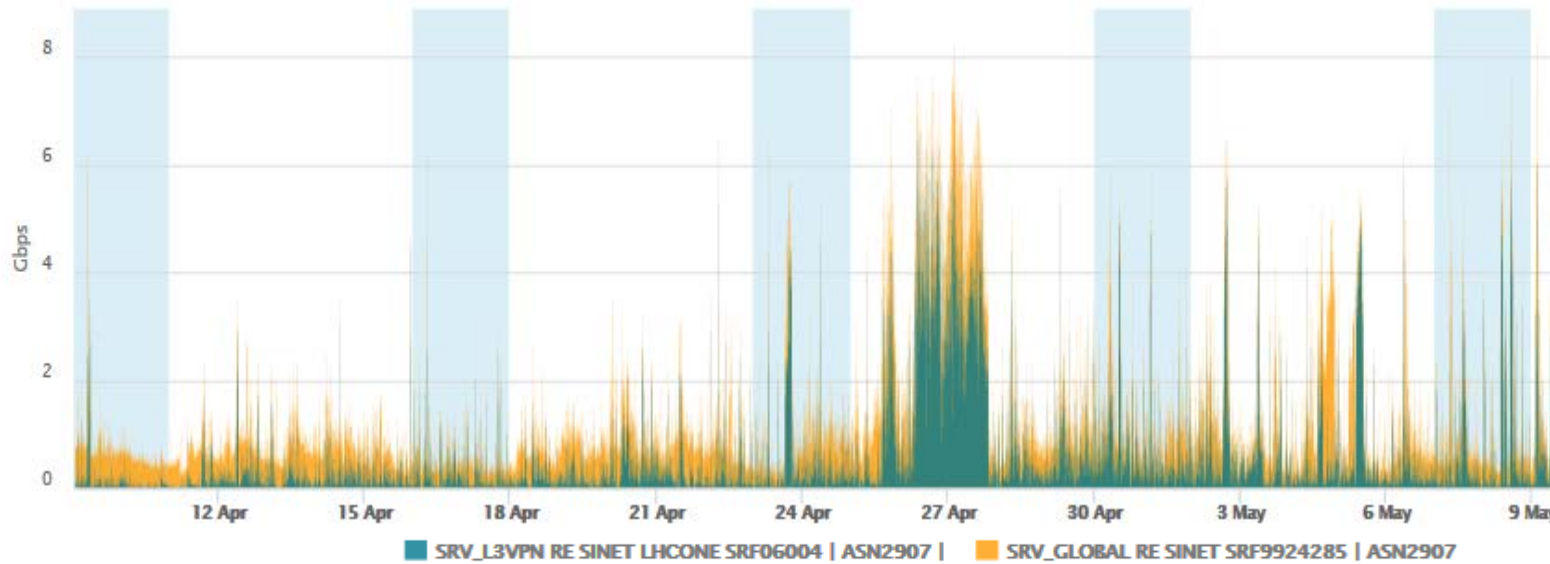

May 2016

Funded by the European Union

Japan-Europe users

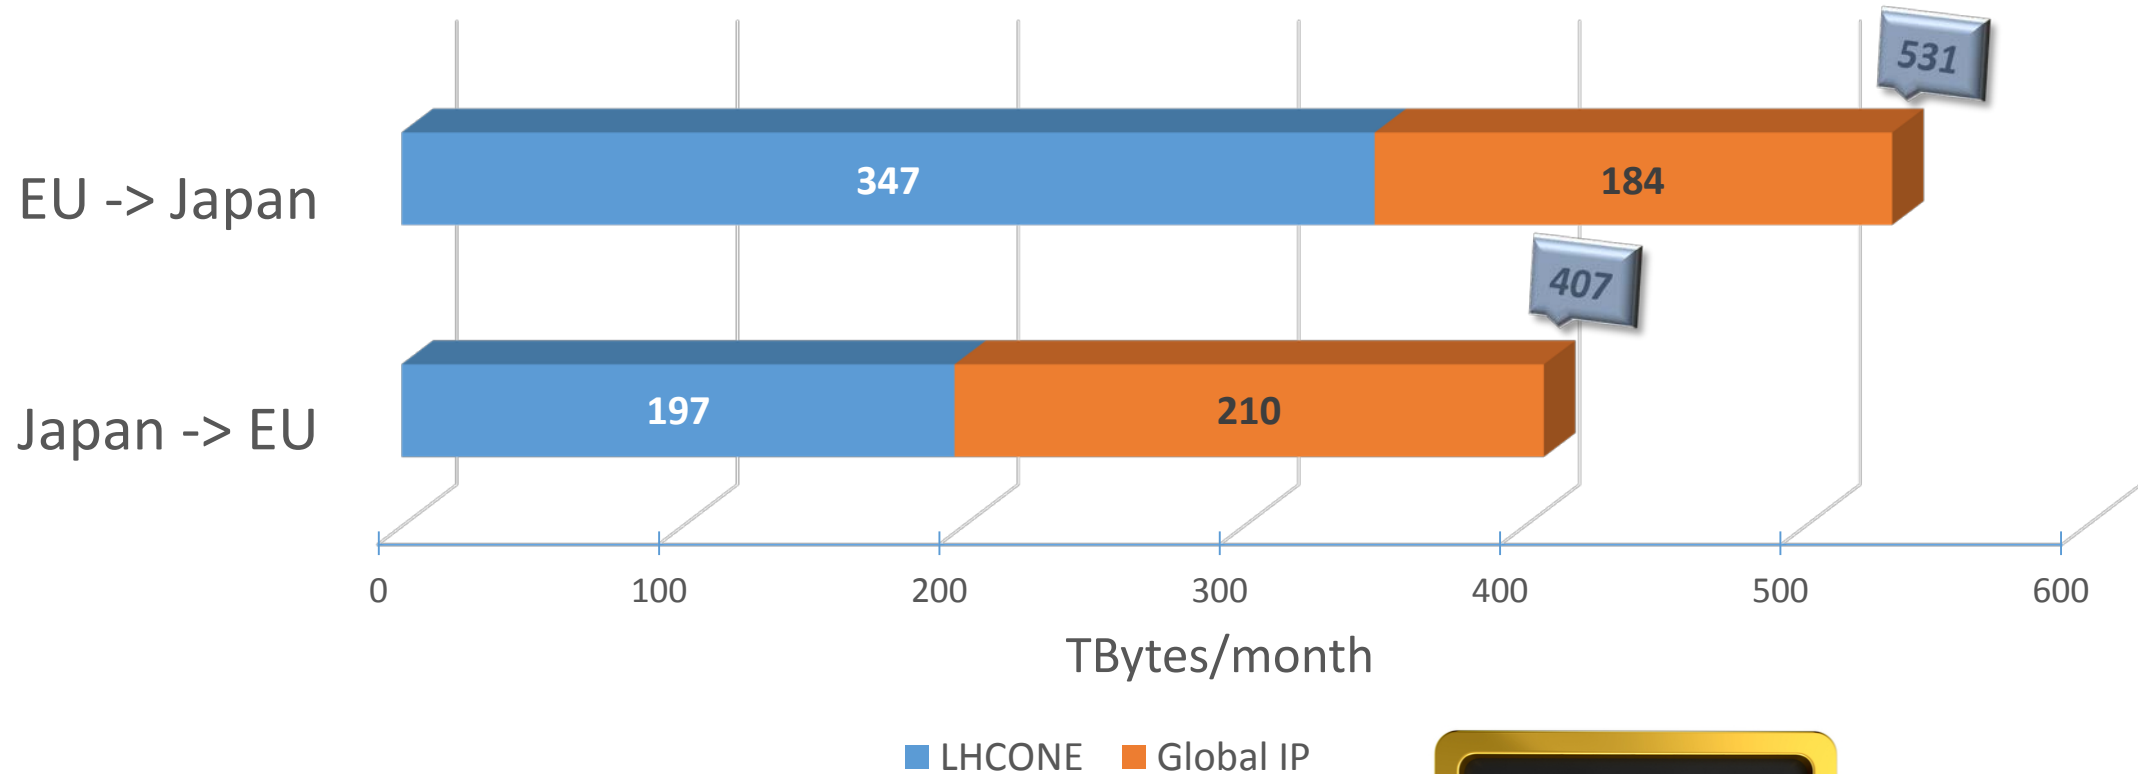

Network traffic

Europe -> Japan

Data movement *(last month)*

About 41,700 hours of

Top talkers (*Japan*)

Total TBytes (ingress+egress) - last month

Top talkers (*Europe*)

Total TBytes (ingress+egress) - last month

Support to the HEP community

- **LHC**

- Tokyo-LCG2 (Tier2) for ATLAS experiment at ICEPP
- Connected to LHCONE

- **BELLE II**

- KEK connection to LHCONE underway
- perfSONAR monitoring infrastructure

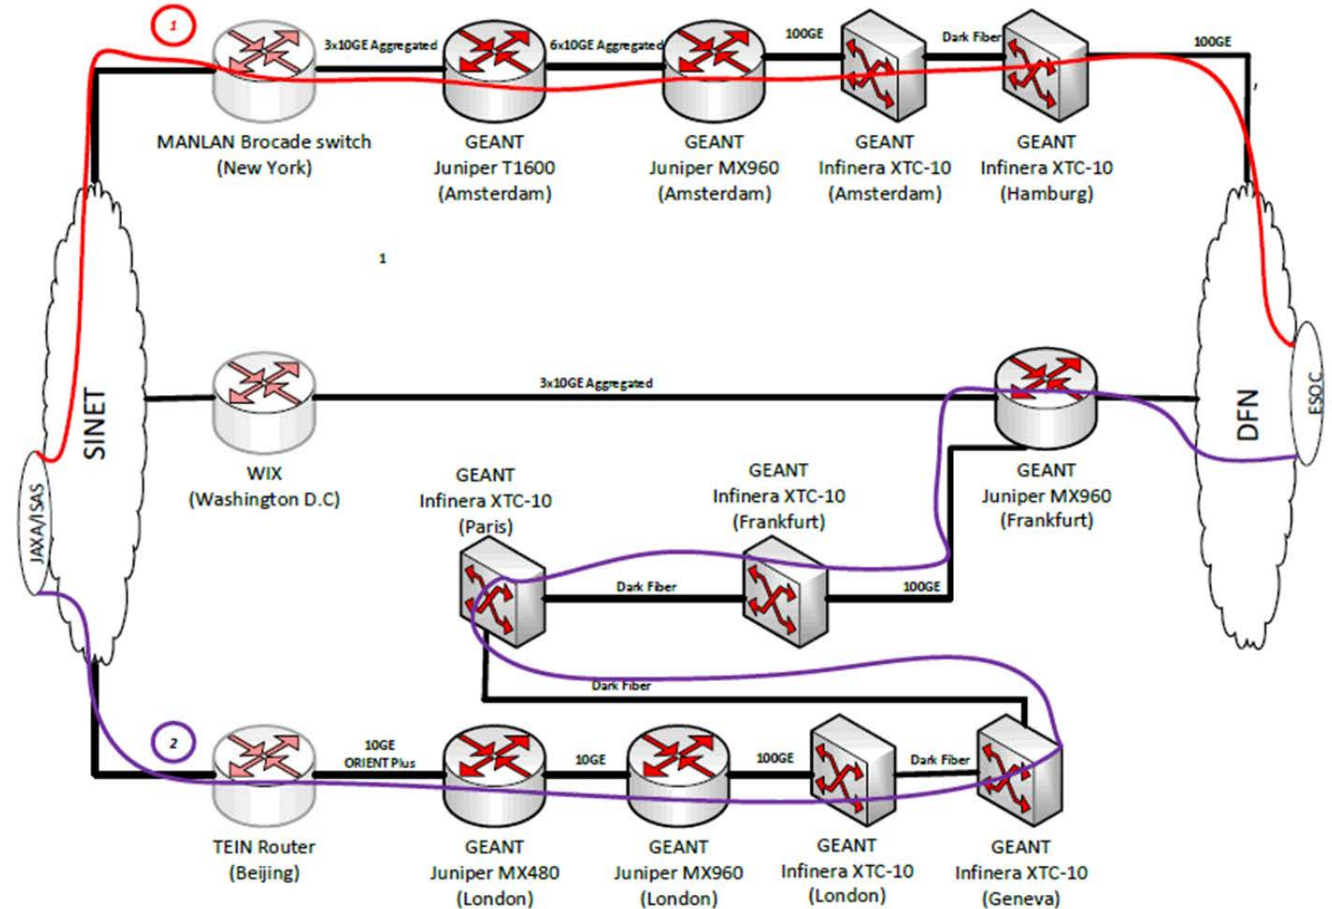

ITER – fusion research

- 10Gbps connection between Rokkasho (HELIOS supercomputer) and the nuclear facility in Cadarache (France) via Tokyo-London link (previously via North America)

Earth observation

- Collaboration between European Space Operations Centre (ESOC) and Japan Aerospace Exploration Agency (JAXA)
- Joint mission control for Hayabusa2 and BepiColombo satellites
- GÉANT assisted with setting up redundant and diverse circuits from ESOC to JAXA sites (from Darmstadt, Germany to Yokohama)

The World's Main VLBI Stations

Future possible EU-Japan collaborations

- **Life sciences**

- **Genomics database** distribution
 - National Institute of Genetics (Mishima) – collaboration with EBI/EMBL
- **Pan-cancer initiative**
 - IMSUT/RIKEN – collaboration with DKFZ (Germany)

- **Physics**

- **ITER**
 - JT60SA (Naka)
 - ITER->DEMO roadmap
- **T2K/HyperK/KAGRA** (Kamioka) – large European presence in the collaboration
- **International Linear Collider (ILC)**– LHC scale international collaboration

- **Earth observation**

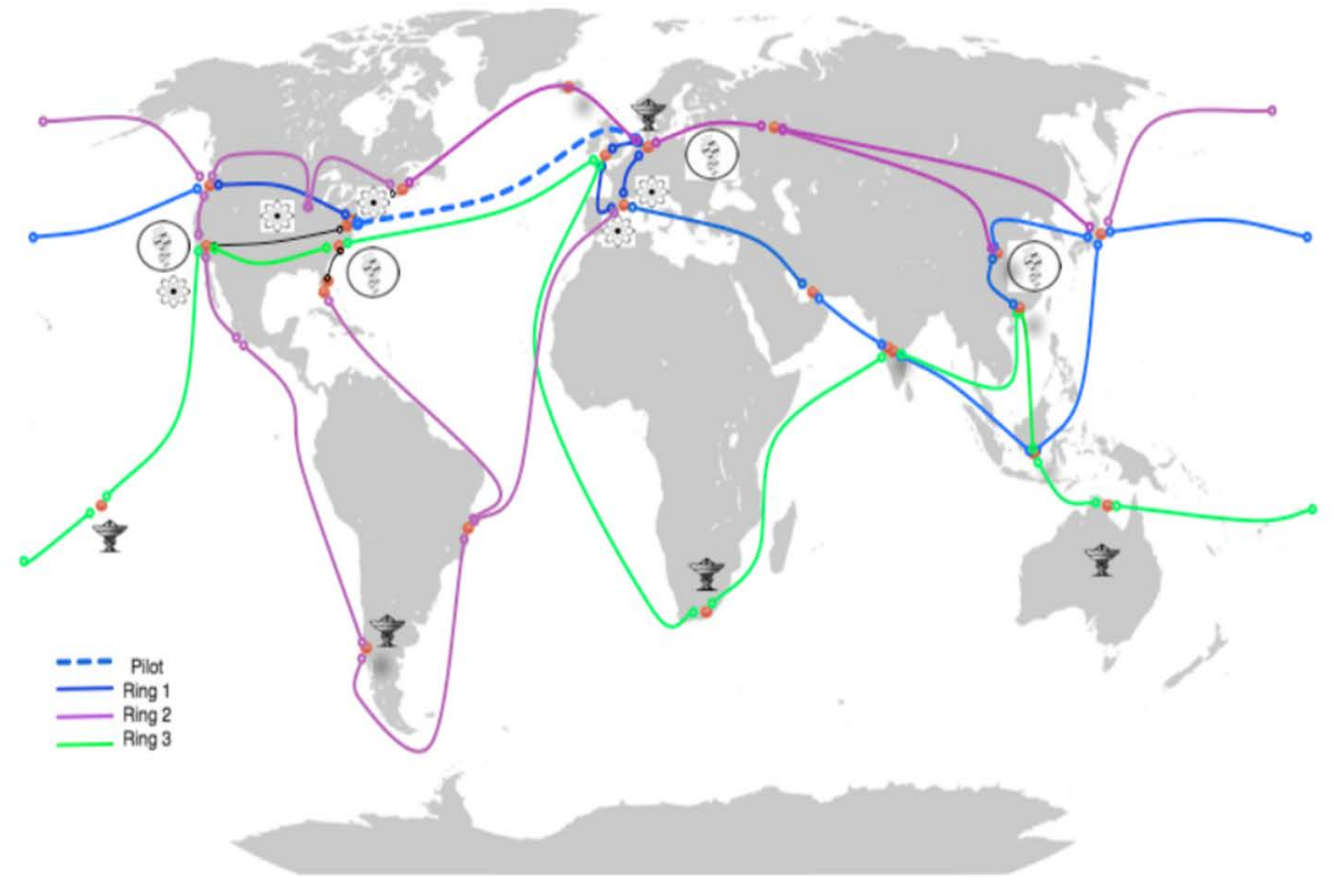

- **JEM-EUSO** – large international collaborations
- **Hinode (ISAS/JAXA)** – ESA and STFC (UK) are involved
- **CEReS** (Chiba)
- **EISCAT** (Nagoya) – Nordic European countries involved

Global Network Directions

- No global R&E Network coordination existed prior to September 2012
- Global R&E Network CEO Forum formed
- ‘G20’ style, participants from all world regions including Japan
- Strategic dialogue & expert Working Groups:
 - Network
 - Middleware
 - Upper-layer advanced services
- “Global Network Architecture – A well-defined, inclusive, global architecture for, and a roadmap towards, interconnecting the Research and Education Networks on a global scale, taking into account input from the large science & education projects”

Principles for a 'Global Network Architecture' (GNA)

- A reference architecture, not a network
 - Based on interconnected rings and open exchange points
- Goal is to collaboratively procure and build a global R&E infrastructure
- It is a new paradigm for intercontinental R&E networking based on federation, co-operation, co-ordination

Future (artist's impression)

Possible Network Technology Collaborations

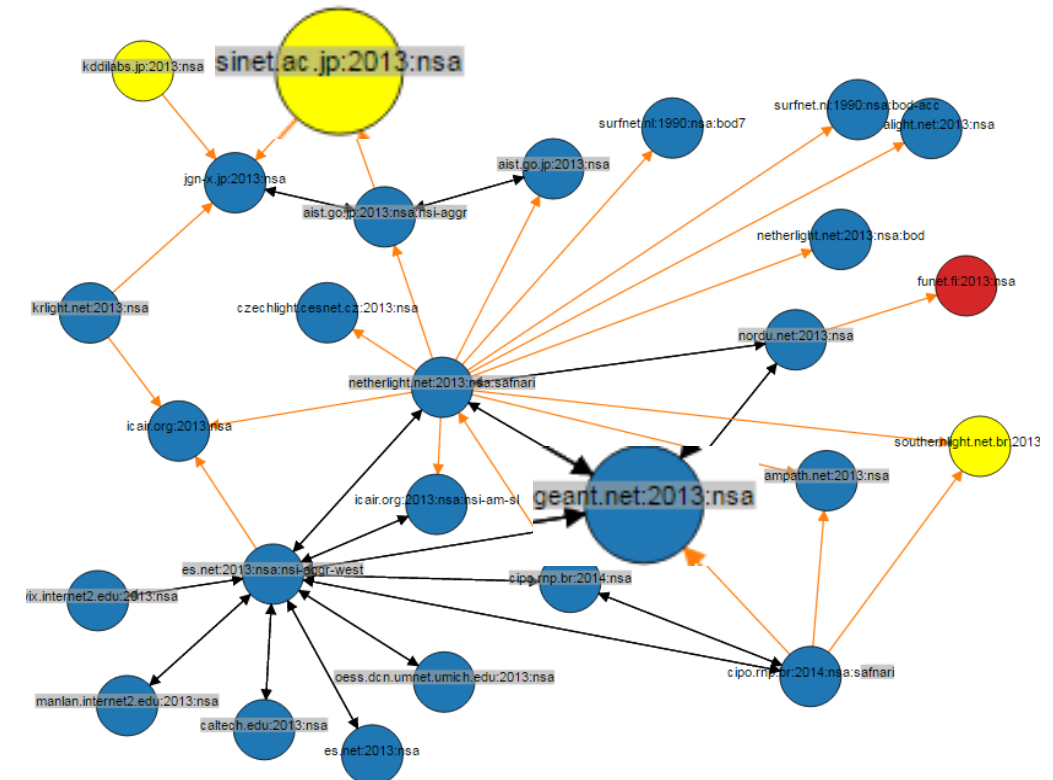

Network Service Interface (NSI)

- NSI provides dynamic network connections that transit R&E networks.
- GÉANT has an NSI dynamic service and is a partner in the GLIF AutoGOLE.
- We hope an NSI connection with SINET5 can lead to closer collaboration.

Software Defined Networking (SDN)

- GÉANT is working closely with ON.Lab to extend the ONOS controller.
- We are also working closely with CORSA to develop a pipeline to support L2 and L3 services.
- We have a plan to progressively roll this out in the GÉANT backbone starting in the next 12 months.

GÉANT supporting SINET

Welcoming SINET to the new GÉANT London data centre (Slough)

- State of the art data centre
- SINET rack and equipment fully operational
- GÉANT proud to be hosting SINET!
- Excellent co-operation between GÉANT and SINET teams

- GÉANT values NII/SINET as a long-standing and strategic partner.
- Exciting opportunities for further collaborations between Europe and Japan powered by our connectivity.
- The new SINET5 capacity to Europe marks the next stage of our co-operation, GÉANT is honoured to support.
- GÉANT looks forward to its successful service and future upgrades. EU/Japan traffic growth will need 100Gbps before too long.
- GÉANT congratulates NII on the SINET5 launch.....

Congratulations!
