

Chapter 1 Mathematical Methods

- 1.1 Time Average vs. Ensemble Average
- 1.2 Statistically Stationary vs. Nonstationary Processes
- 1.3 Basic Stochastic Processes
- 1.4 Burgess Variance Theorem
- 1.5 Fourier Analysis
- 1.6 Random pulse train
- 1.7 Shot noise in a vacuum diode

Chapter 2 Principles of Quantum Statistics

- 2.1 Symmetrization Postulate of Quantum Mechanics
- 2.2 Thermodynamic Partition Functions
- 2.3 Various Distribution Functions
- 2.4 Equipartition Theorem of Statistical Mechanics
- 2.5 Non-commutability Postulate of Quantum Mechanics
- 2.6 Quantum and thermal noise of a simple harmonic oscillator

Chapter 3 Classical and Quantum Circuit Theory

- 3.1 Two-Terminal Networks -Thevenin Equivalent Circuit-
- 3.2 Four-Terminal Networks (Two Ports)
- 3.3 Noise Figure of a Linear Two-Port
- 3.4 Noise Figure of Amplifiers in Cascade
- 3.5 Thermal Noise of a Linear n -port Network
- 3.6 Quantum Circuit Theory

Chapter 4 Macroscopic Conductors

- 4.1 Brownian Particle Model of Thermal Noise
- 4.2 Fluctuation-Dissipation Theorem
- 4.3 Transmission Line Model of Thermal Noise

Chapter 5 Mesoscopic Conductors

- 5.1 Electrons in Mesoscopic Two Dimensional Systems
- 5.2 Ballistic Transport
- 5.3 Partition Noise in Mesoscopic Conductors
- 5.4 Suppression of Mesoscopic Partition Noise
- 5.5 Recovery of Johnson-Nyquist Noise

Chapter 6 Macroscopic pn Junction Diodes

- 6.1 Shot Noise in a Vacuum Diode: Revisit
- 6.2 pn Junction Diodes Under Constant Voltage Operation
- 6.3 Bipolar Transistor
- 6.4 pn Junction Diodes Under Constant Current Operation

Chapter 7 Mesoscopic pn Junction – Coulomb Blockade, Squeezing and Single Photon Generation –

- 7.1 Coulomb Blockade Effect in a pn Junction
- 7.2 Langevin Theory of pn Junction Diodes
- 7.3 Experimental Evidence for Intensity Squeezing and Quantum Correlation
- 7.4 Single Photon Turnstile Device
- 7.5 Quantum Dot Single Photon Source

Chapter 8 Noise of pn Junction Lasers and Detectors

- 8.1 Amplitude Squeezing in Semiconductor Lasers
- 8.2 Excess Noise in Avalanche Photodiode

Chapter 9 $1/f$ Noise and Random Telegraph Signals

- 9.1 Characteristics of $1/f$ Noise
- 9.2 Physical Model of $1/f$ Noise
- 9.3 Random Telegraph Signals

Chapter 10 Negative Conductance Oscillators(Lasers)

- 10.1 Master Equation of a Laser Oscillator
- 10.2 Free-Running Van der Pol Oscillators
- 10.3 Amplitude and Phase Noise of an Internal Field
- 10.4 Spectral Linewidth
- 10.5 Spontaneous Emission Coupling Efficiency
- 10.6 Amplitude and Phase Noise of an Output Wave
- 10.7 Injection-Locked Oscillators
- 10.8 Frequency Modulation Feedback and Phase-Locked-Loop oscillators
- 10.9 Quantum Noise Theory of Free-Running Lasers
- 10.10 Quantum Noise Theory of Injection-Locked Lasers

Chapter 11 Parametric Amplifiers and Oscillator

- 11.1 Non-Degenerate Parametric Amplifier
- 11.2 Degenerate Parametric Amplifier
- 11.3 Quantum Limit of a Linear Amplifier

11.4 Quantum Correlation between Signal and Idler Waves from Nondegenerate Parametric Amplifiers

Chapter 12 Classical Communication Systems

12.1 Regeneration in Digital Communication Systems

12.2 Direct Detection in PCM-IM Communication Systems

12.3 Optical Repeater Amplifiers in PCM-IM Systems

12.4 Fundamental Limits of Communication Systems

Chapter 13 Quantum communication

13.1 Quantum key distribution

13.2 Quantum teleportation

13.3 Quantum repeater

Chapter 14 Spin Qubits for Quantum Information Processing

14.1 Simple magnetic resonance theory

14.2 Gyromagnetic ratio and g -factor

14.3 Thermal population and saturation

14.4 Manipulation of a single spin

14.5 Optical manipulation of semiconductor spin qubits

14.6 Double resonance

Chapter 15 Decoherence, refocusing and dynamical decoupling of spin qubits

15.1 Decoherence of spin qubits

15.2 Refocusing of spin qubits

15.3 Decoupling of spin qubits

15.4 Refocusing and decoupling experiments for electron spins and nuclear spins

Chapter 16 Fault-tolerant quantum computers
