Open Science

What is open science?

Open Science describes a way of working which makes research either more **open** or more **collaborative** or more **transparent**.

More Open

- More outputs of research are available without charge to the end user and/or less restrictive user reuse rights

More Collaborative

- Research activities include other stakeholders, including the public

More transparent

- The research process is made clearer, more discoverable and more reproducible

- 5th Basic Plan, 2016-2020
- JST and JSPS OA policies
- Japan Science Cloud under discussion

- OSTP memo
- NIH Data Science Initiative
- NAS

More Open

What is open access (OA)?

- Free and permanent access to scholarly research for everyone
- Referred to as Public Access in the US
- **Gold open access**
 - Final version of an article is immediately accessible to everyone
 - Cost of publishing is recovered upfront
 - Typically as an Article Publishing Charge (APC)
- **Green open access:**
 - A version of a subscription article is made available open access
 - Usually after an embargo period
 - Normally a draft copy of the article but can also be the final version

Total article growth by journal business model

In 2016 there were an estimated 2.1 million subscription and 0.5 million open access articles published worldwide.

Subscription content

- 80% share of total articles in 2016

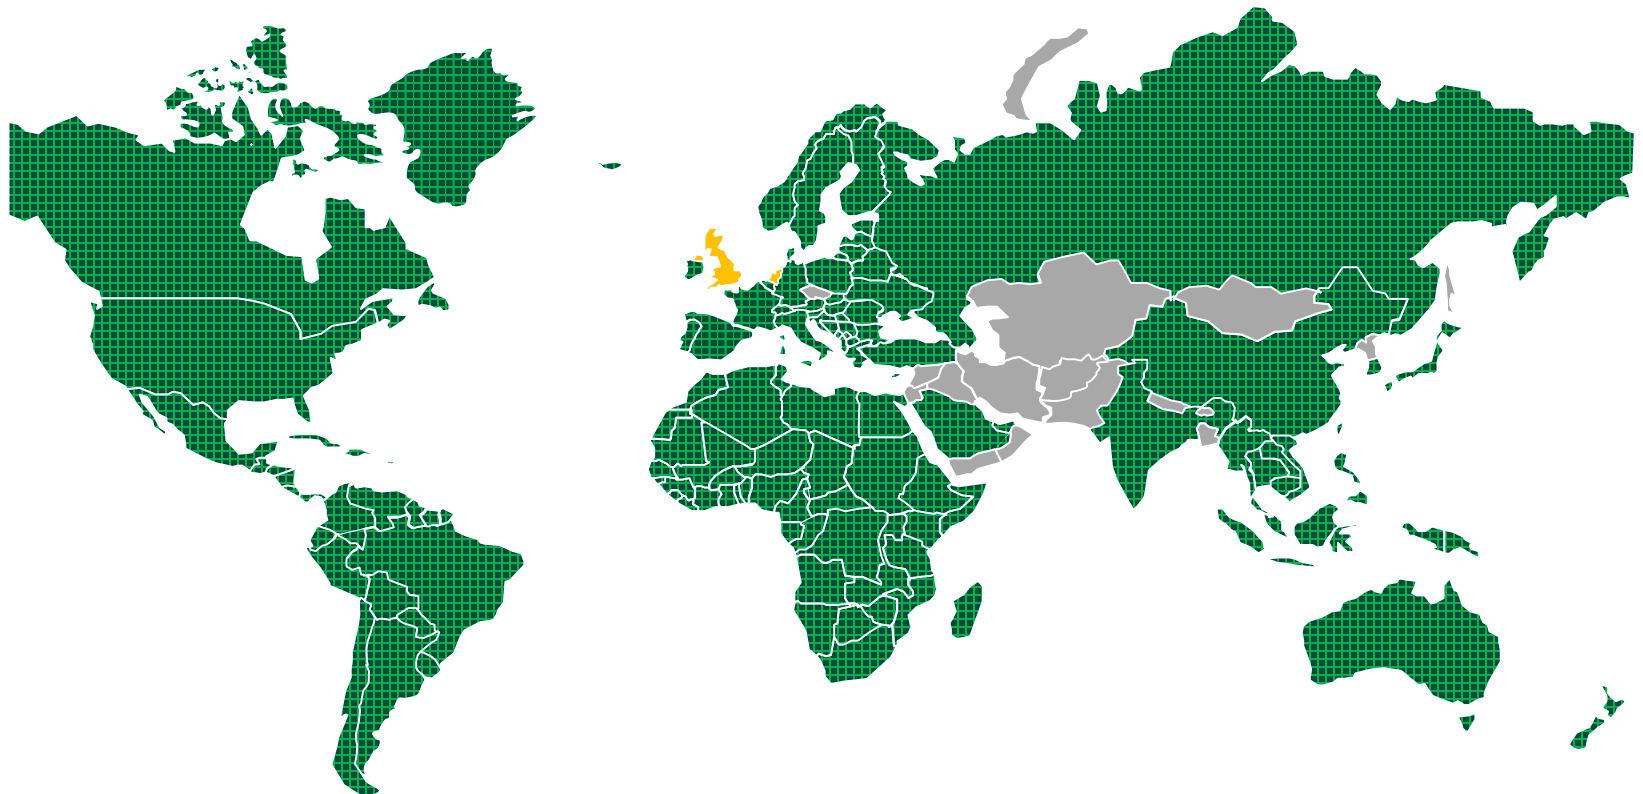

Open access content

- APC based open access articles is 16% share of total content in 2016
- All gold open access, including subsidized articles, is 20% share of total content.

Elsevier perspective

- In 2016, Elsevier published around 480,000 articles
- Includes over 25,000 open access articles

Global perspective on OA

China and OA: a global snapshot

Elsevier and open access

Gold open access

- 2nd largest gold open access publisher
- Publish over 170 fully open access journals
- Publish over 1,850 hybrid journals
- Published over 25,000 open access articles in 2016
- Choice of either a commercial (CC BY) or non-commercial (CC-BY-NC-ND) user license.
- Article publishing charges (APCs) range from \$150- \$5000 (US Dollars)

Green open access

- Largest publisher enabler of green open access
- All 2500+ journals provide a green open access option
- Participate in CHORUS and support pilots with institutions and international funders
- Free API program to fuel repositories
- Share link service provides 50 days free access to recently published research
- Open archives in 108 journals, including Cell Press titles after 12 months

Fueling Institutional repositories: Free API program

Get metadata & abstracts

Search API can extract the metadata and abstracts of your affiliated authors to help populate your repository, enhance discoverability and create links or embed final version

Show the final version

Entitlements API** can ensure subscribed users see the final version and visitors can see the accepted manuscript hosted on your repository

Keep users on your IR

Article Retrieval API embeds the final article in your repository so subscribers don't leave your site to access the article

Make manuscripts public

Hosting permissions API can retrieve embargo end dates so you can make manuscripts automatically available to the public after embargo

Did you know?

Scopus customers can also integrate Scopus APIs to retrieve metadata and abstracts across all publishers

CHORUS

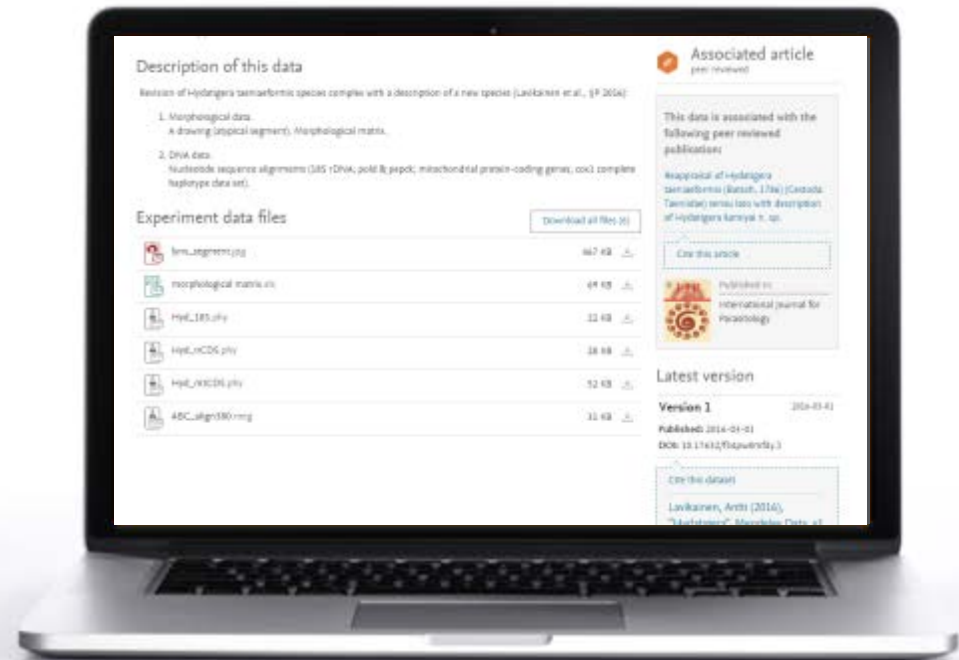

- A low cost solution that widens access, compliance, discovery, and preservation of peer reviewed articles
- Addresses critical pain points of cost and efficiency by:
 - Avoiding duplication of effort
 - Increasing compliance
 - Maximizing the benefit from existing, proven infrastructure
 - Transparent reporting and tracking for funders and institutions
- Currently operational for US federal agencies and piloting services in Japan and Australia
- Piloting services for Institutional Repositories

Storing research data

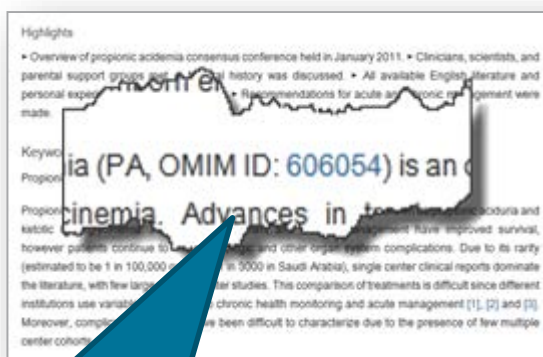

- Submitting authors can store research data in Mendeley data repository and link this to their article on ScienceDirect
- Open access, free-to-use repository
- Hosts all formats (raw, processed data, tables, code and software)
- 10GB free storage and CC0 license option
- Assigns data DOI to make it independently citable
- Partnership with DANS for long term storage and preservation

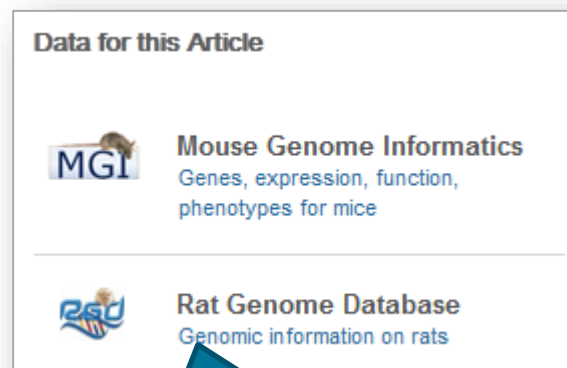

Linking articles to external data repositories

- Free Data-linking tool provides one click access to relevant stored data sets
- 50+ leading domain specific data repositories
- Linking enabled by in-article accession numbers, data DOI's, or data banners

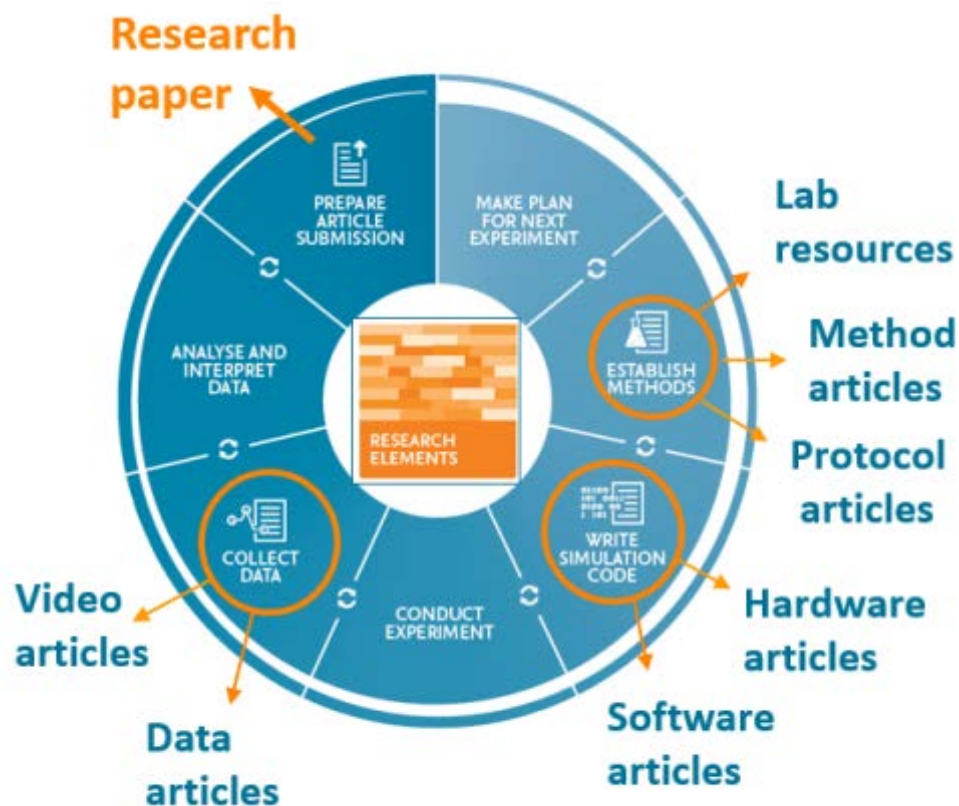

Linking through **in-article data accession numbers**

Database banners shown next to the article on ScienceDirect

Publishing data articles

- Offer researchers an easy channel to publish their research output, **receive credit**, and **make research objects discoverable**
- Dedicated sections in regular journals
- Specialized, fast and transparent peer-review process
- Co-submission service via regular journals for data articles
- Primarily **Open Access**, APCs of ~500 USD

**Because no matter what field of research you are in,
DATA, METHODS and SOFTWARE always matter**

Open peer review reports

Pilot in 5 journals to experiment with publishing peer review reports as openly available research outputs with their own DOI.

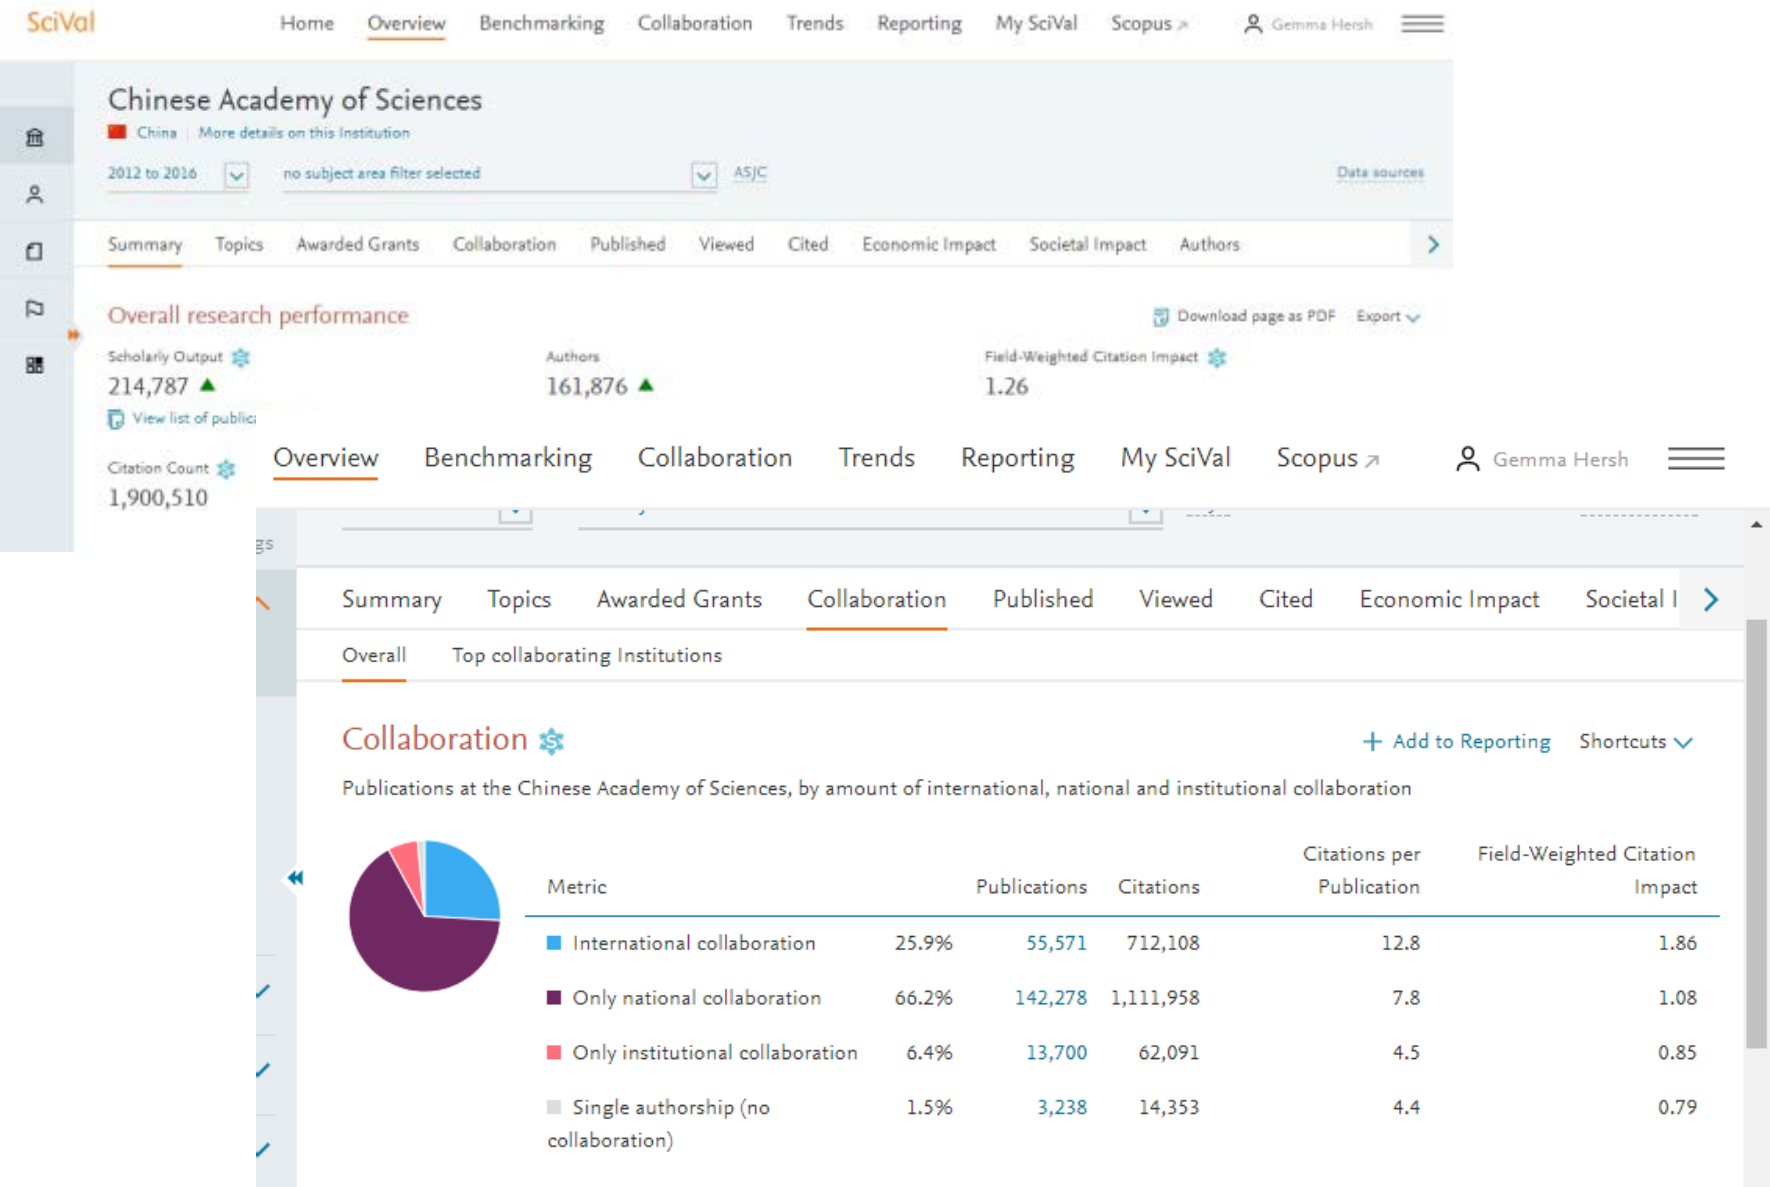

Editors	Reviewers	Authors
<ul style="list-style-type: none">• 70% of those surveyed believe that reports are more in depth and constructive i.e. improved and more useful to authors, as a result of being made open• Some concern it may make it harder to find reviewers.	<ul style="list-style-type: none">• Like the ability to get recognition• Over 95% said publishing review reports didn't influence their recommendation nor would it influence them accepting further review invites for the journal.	<p>Generally positive about having open peer review reports next to their article</p> <p>Little impact on their journal choice, indeed slightly more likely to choose a journal offering this.</p>

Forward look: Extend to other interested journals and provide more data about the peer review process on ScienceDirect

More Collaborative

Collaboration drives performance

SSRN – tomorrow's research today

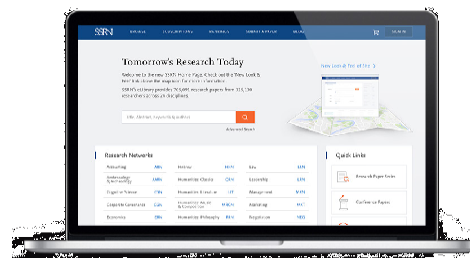

- SSRN is devoted to the rapid worldwide dissemination of research and is composed of a number of specialized research networks.
- SSRN's eLibrary provides 761,906 research papers from 354,694 researchers across 30 disciplines.

Tomorrow's Research Today

SSRN's global reach provides the tools to disseminate innovative ideas through our online repository, making librarians' jobs easier and keeping academics up-to-date.

SSRN provides the tools; your academic team enjoys the benefit.

**Always Growing.
Always Something New.**

A more inclusive world of research

Home > Research Intelligence > Resource library > Gender in the Global ...

Gender in the Global Research Landscape Report

"As a steward of world research, Elsevier has a responsibility to promote gender equality in Science, Technology, Engineering, and Mathematics and advance understanding of the impact of gender, sex, and diversity in research. In this regard, Elsevier fully supports the United Nations' Sustainable Development Goal 5, "to achieve gender equality and empower all women and girls," and the Global Research Council's Statement of Principles and Actions Promoting the Equality and Status of Women in Research." – Ron Mobed, Elsevier CEO

Critical issues related to gender disparity and bias must be examined by sound studies. Drawing upon our high-quality global data sources, analytical expertise and unique gender disambiguation methodology,

More Transparent

Comprehensive Journal Data Guidelines

<https://www.elsevier.com/authors/author-services/research-data/data-guidelines>

TOP GUIDELINES

TRANSPARENCY AND OPENNESS PROMOTION

<https://cos.io/our-services/top-guidelines/>

DataSearch link from Scopus

Research data enhance the value of an article and aid reproducibility. Scopus is recognizing the importance of research data as both output and sourcing for articles.

- Last March 2017, Scopus started a collaboration with [DLI Service](#) to find data related to any specific document.
- With this new release, Scopus is enhancing its involvement in research data by starting a new collaboration with [DataSearch](#).

Implemented data citations

- Authors are encouraged to cite datasets
- Used to access a direct link to stored datasets and encourage data sharing
- Implemented the FORCE 11 data citation principles for all journals
- Data references contain different elements than article references
 - Require new fields to be added
 - Tags to distinguish between data and article references

Enhanced Reporting

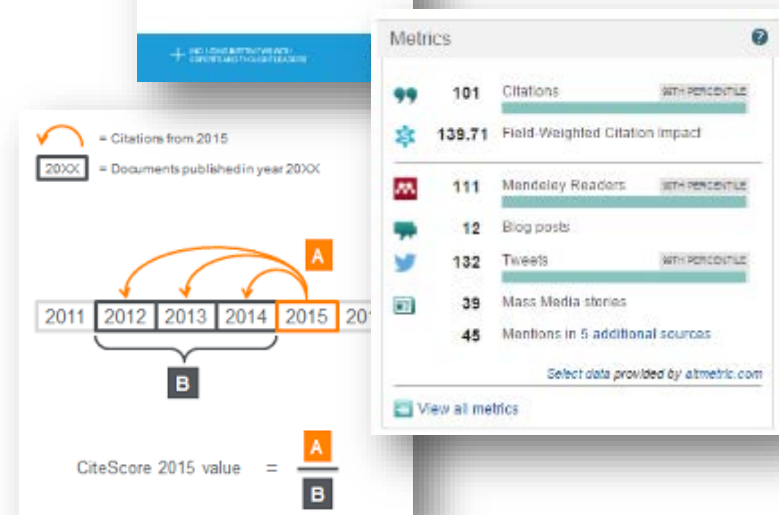

- WHO calling for main findings submitted for publication - including negative findings
 - Launch of journal ***New Negatives in Plant Sciences***
- Scientists need a clear framework to submit data for review and publication.
 - Launch journals ***Data in Brief*** and ***Genomics Data***
- AllTrials calls for all clinical trials to be registered with full methods and summary results reported
 - Launch of journal ***Contemporary Clinical Trials Communications***
 - Participation in new **Crossref** pilot to link published reports of clinical trials to the registered study

Elsevier and research metrics

Our Metrics Manifesto

- Need to use different metrics and common sense
 - Decisions should be based on both quantitative and qualitative input
 - Should always use at least two metrics (more than one way to 'excellence')
- The methodologies should be open, transparent, valid and replicable
- Definitions should be owned by the community
 - Need trust between the parties using metrics to evaluate

What does SSRN do?

- online repository of non-refereed working and refereed accepted papers
- email/RSS alerts for new submissions and web access to all content
- non-exclusive license to post/distribute allows authors to retain copyright
- levels the playing field amongst researchers
- strongly support open/sharing for 20+ years
