International Scholarly Communication Initiative

The International Scholarly Communication Initiative (SPARC Japan) is a project to strengthen the electronic journals of the scholarly publications of Japan’s academic societies, with a view to keeping in the hands of Japanese researchers the outstanding research results that are currently published abroad, and to further promote the international dissemination of research results. Progress in the digitization of scholarly journals has stimulated rapid change in the configuration of the distribution of research results; however, scholarly journals in Japan had not kept pace with this trend toward the digitization and international distribution.

Meanwhile, the project, which was launched in 2003 through support by the Ministry of Education, Culture, Sports, Science and Technology, has encouraged the digitization of scholarly journals, especially English languages journals, published in Japan, with SPARC Japan Publishing Partner. The aim of this project is to create a self-sustaining cost-effective model that will enable the stable transmission of Japanese scholarly journals and improve their name recognition overseas. The next three years, beginning in 2006, is positioned as the 2nd term following the project of 2003-5. In this term, we will promote solutions to issues unresolved in the first term; implementing overarching support activities transcending academic societies; developing an environment that will foster independent scholarly journal publishing activities.

Overseas initiatives have been developed in North America, Europe, etc., for the creation of competitive markets to revoke the problem of surging prices through support for the digitization of scholarly journals by researchers at the urging of university library organizations. As a result, SPARC (Scholarly Publishing and Academic Resources Coalition) is being developed in the U.S., and SPARC Europe activities (EuroSparc) in Europe.

In addition, the open access movement, which seeks to provide unobstructed access to research results, is also being developed centered in the U.S. and Europe, and activities involving government agencies, research assistance organizations and others are becoming more vigorous.

Goals of the International Scholarly Communication Initiative

During the 2nd term, we will develop operations based primarily on the following goals.

Development of self-sustaining cost-recovery model

We will encourage a shift away from conventional Japanese style publication to international publication including the promotion of site license contracts at university libraries and promote the independence of SPARC Japan Publishing Partners.

Promotion of international collaboration

With the encouragement of the conclusion of the MOU with SPARC, we will call attention to our activities on a global scale and provide support to expand collaboration worldwide with the aim of increasing and establishing the name recognition of Japanese scholarly journals.

Development of advocacy activities

We will provide opportunities to disseminate and share information through human resources training including continuous seminars for persons involved in scholarly journals. In addition, in regard to support for the development of a self-sustaining cost-recovery model since the realization of site license contracts between libraries and academic societies requires the enhancement of the awareness of researchers who use the electronic journals, we will also promote the dissemination of public information and enlightenment activities for that purpose.

ACHIEVEMENT OBJECTIVES

Independence and expansion of scholarly publishing activities through the establishment of a self-sustaining cost-recovery model

Expanding of global scholarly channels based on the promotion of journal digitization and international collaboration

International transmission of academic research results and the establishment of a greater awareness of Japan’s scholarly contribution

PROJECT ACTIVITIES

Support for digitization and internationalization

- Sharing of standards
- Development and introduction of an online policy database for scholarly journal publishers
- Issues between scholarly journals

Support for self-issuing scholarly journal development

- Creation and submission of scholarly journal projects
- Conferences and popularizing activities

Conferences: SPARC Japan seminars

- Symposium for international cooperation
- Presidents of research societies
- Scholars and representatives of book publishing partners

Support for self-issuing scholarly journal development

- Creation and submission of scholarly journal projects
- Conferences and popularizing activities

International scholarly communication initiative

- Conference with Japan’s research societies
- Creation and submission of scholarly journal projects
- Conferences and popularizing activities
